The technique is based upon the use of a manager as a heuristic to guide and control the search. He prescribes the initial values for the parameters or variables, the number of values to be evaluated, and the increment that will separate each value. A computer program evaluates all combinations of the values and reports the best value for the criterion function specified in the model. Seeing these results, the manager may change the search parameters and thereby approach the optimum with the desired level of accuracy. The search procedure is demonstrated in a data based competitive parameter estimation problem and a dynamic optimum marketing mix determination analysis, The relationship of this man-machine trial and error search routine to other numeric optimization techniques is indicated. The proposed technique appears to be a flexible, single and relatively efficient method of analyzing marketing models.
